

HI
NICE TO MEET YOU

I am a graphic designer graduated from the California College of the Arts, primarily focusing on poster design, visual identity, and layout design. My work centers on building clear visual systems, translating abstract ideas into strong graphic expressions through typography, composition, and conceptual storytelling.

Application

The color of the design is not fixed, but can be flexibly adjusted according to different application environments, background materials, and environmental conditions by formulating a systematic color scheme. The brand can ensure that the logo maintains good recognizability in various scenarios and is consistent with the overall visual style.

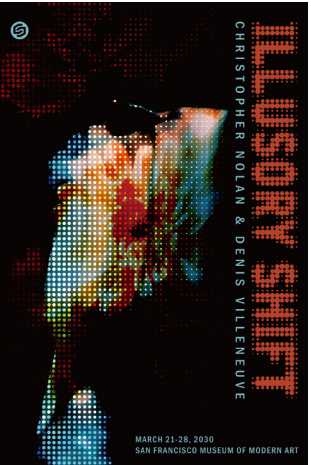

ILLUSORY SHIFT

DUXING

Application

The application of logos is not limited to paper or digital media, but also extends to various physical objects and environmental components in the living space. Among them, signs and restaurant facades are the two most common and most critical applications scenarios. They are not only the core carriers of brand recognition, but also directly affect customers' first impression and overall experience.

Logo

When a complex logo is applied to larger items, its intricate details become more prominent and more engaging. The expanded surface area allows viewers to appreciate the craftsmanship and design nuances that might otherwise go unnoticed in smaller applications.

DUXING

Asian Restaurant

85 New wave

The “85 New Wave” was an influential contemporary art movement that emerged in China around 1985. As one of the most significant waves of artistic and intellectual liberation following the Reform and Opening-up era, it was largely initiated by young artists seeking to break away from the constraints of traditional academic art. The movement emphasized individuality, conceptual thinking, and experimental approaches to art-making. Artists drew inspiration from various Western modernist and contemporary art philosophies, such as Expressionism, Constructivism, and Dadaism, integrating elements of philosophy, literature, and social critique into their work. The 85 New Wave not only diversified artistic forms in China but also marked a critical turning point as Chinese art shifted from collective ideology toward personal expression.

Design

My design is inspired by the calligraphic experiments seen in the 1985 New Wave movement in China. During this artistic uprising, many artists deconstructed traditional Chinese calligraphy, liberating it from its conventional functional roles and transforming it into a medium for individual expression and spiritual awakening. Chinese calligraphy, inherently rich in emotional intensity and free-flowing brushwork, became a symbol of defiance and intellectual freedom under the influence of this movement.

Building upon this spirit, I have incorporated the expressive essence of calligraphic strokes into the visual language of the restaurant. The name of the restaurant, DUXING, derives from the phrase “While all others are drunk, I alone am sober.” It symbolizes clarity, individuality, and conviction in a world lost in confusion. This reflects not only the independent character of the brand but also a desire to express cultural awareness and aesthetic awakening through design.

Emtional Room

Immersive VR Experience

Emotional Room

This project explores emotion as an embodied experience rather than a visual or narrative representation.

Instead of describing feelings, it creates immersive environments where users physically encounter different emotional states. The project is structured as three interconnected spaces: anxiety, peace, and joy. Each space translates emotion into spatial conditions, interaction systems, and sensory feedback.

Anxiety is constructed through pressure, urgency, and consequence. Peace is experienced through stillness, slow interaction, and sound. Joy emerges through movement, speed, and the transformation of the body in space.

By shifting emotion from something observed to something lived, the project invites users to reflect on how environments shape internal states—and how those states can be navigated, resisted, or transformed.

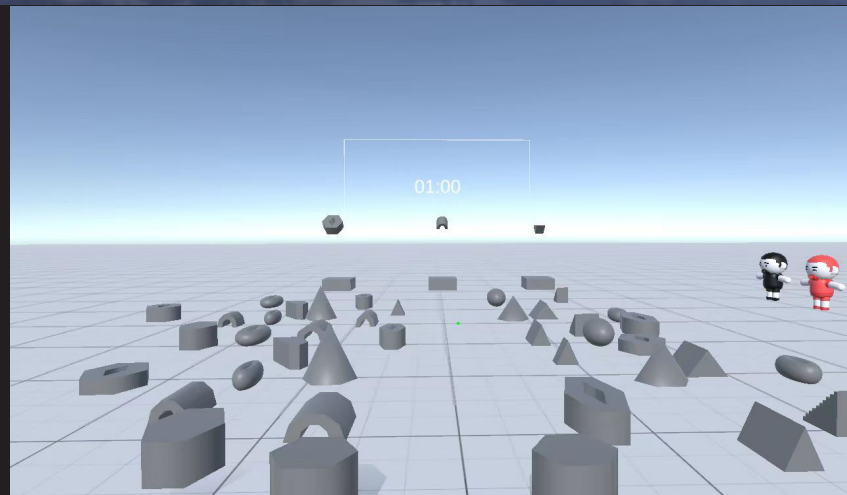

IMMERSIVE VR EXPERIENCE

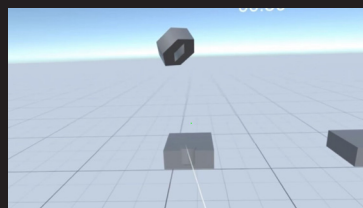

TIME & MORTALITY

EXPLORE & SOUND

SKIING

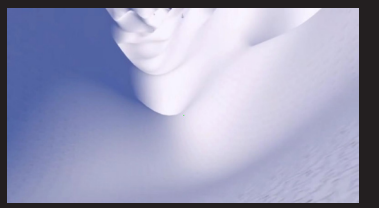

Solve the timer puzzle by placing correct items before the clock runs out.

Explore a countryside world, find a earth ball, and activate soothing musci by touch.

Experience an exhilarating skiing journey down snowy moutains, navigating through.
